

What people are saying about Boost Post

Prepared 20 August 2026 · covering 1–31 July 2026 · first monthly edition

What this covers: everything people posted publicly about the Facebook Boost Post button during July 2026. Older posts are still held and used, but only to tell whether something raised this month is new or long-running. **Where we looked:** 29 channels swept — app stores, Trustpilot, G2, Capterra, TrustRadius, Gartner, Reddit, X, TikTok, YouTube, Hacker News, forums, Q&A sites, agency and analyst blogs. **Four returned anything for July.** **What we were trying to answer:** what should the product team fix next, and what changed this month?

COLLECTED IN JULY 9 posts	PRODUCT TEAM CAN FIX 6 of the 9	SOMEONE ELSE OWNS 3 all support	CHANNELS WITH POSTS 4 of 29 swept	SAID THEY'RE LEAVING 0 this month
-------------------------------------	---	---	---	---

TL;DR

Nine posts is a small month, so everything below is ranked rather than given as a percentage, and no trend claim rests on July's volume alone. Seven of the nine came from people who had actually boosted a post. **This report is short because the month was:** 25 of the 29 channels we swept returned nothing for July. It has not been padded to fill a page count.

July had one subject: money people could see leaving and could not stop. Six of the nine posts are about a charge that could not be cancelled, explained or disputed. Not one is about targeting, reach or results.

1 "I can't stop a boost that's already running."

Two posts, both Trustpilot, both mid-July, and **new this month**. A boosted event does not appear in Ads Manager, so it cannot be found or cancelled; the assistant cannot locate, pause or refund it; and Business Suite refuses to edit it. The person watched the spend continue while being unable to stop it. Fix: a cancel that works from where the boost was created. Owner: product.

"Their AI can't cancel the event." — Trustpilot, 13 July

2 "It said my payment failed, then charged me twice."

One post this month, and a **second instance of something first seen in June** — which is why it is here rather than buried. Payments reported as failing across two cards and PayPal, after which the account showed multiple duplicate payments. Two months running is not yet a trend, but it is the pattern worth watching in August. Owner: engineering.

"Now my account shows multiple, duplicate payments made!!!" — Google Play, 1 July

3 "There's nobody to reach when it's my money."

Three posts — the largest single group in July, and all three belong to Support rather than the product team, so they sit in their own section below. Live chat advertised at 5–10 minutes reported as taking 5–7 hours. An AI

assistant that cannot escalate. A hacked-then-disabled account with nothing in the help pages explaining recovery. **Every billing failure above ends here**, which is why it is worth reading the two together.

4 Nobody said they were leaving this month.

Zero explicit departures in July. Across everything we hold, three people have ever said so outright — 2014, 2016 and February 2025 — and none named a rival; they stopped rather than switched. We did not count anyone who merely sounded finished, including the reviewer who warned others off boosting but did not say they had stopped.

5 Brand new, and from analysts rather than users: the measures changed underneath everyone.

From 15 June about 85 long-standing reach and impressions measures stopped updating and were replaced by Views, which counts differently — so any year-on-year comparison breaks at that date. Separately, delivery now reads the ad creative itself to decide who sees it, which puts a single-creative boost at a structural disadvantage. **No user has raised either**, which most likely means the people affected have not yet worked out what happened.

If you do one thing: **make a running boost cancellable from where it was created**. It is the only genuinely new user problem this month, it is the most severe, and right now it is being resolved by banks and card disputes instead of by us.

JULY IN CONTEXT — THE LAST 24 MONTHS

July's nine posts sit against 15 in June and 7 so far in August. **Do not read June-to-July as a fall in complaints** — the rise from March 2026 is our collection reaching the app stores and review sites for the first time, and the month-to-month movement since is well inside the noise of a sample this size. The ten empty months are collection reach, not quiet months. From next month this chart becomes the real comparison, because the periods will finally be like for like.

THE PROBLEMS PEOPLE RAN INTO IN JULY

All six product posts from July, none omitted. "How often" is a rank over nine posts, never a share of users. The last column uses everything we hold from earlier periods to say whether this is new.

WHAT THEY SAID	HOW OFTEN · WHO	A REAL POST	NEW OR LONG-RUNNING
"I can't stop a boost that's already running" A boosted event is absent from Ads Manager, cannot be cancelled or edited, and the assistant cannot pause or refund it · product	Most, 2 posts Users · Trustpilot Angry	<i>"Their AI can't cancel the event."</i> Trustpilot · 13 Jul	New First seen 13 Jul
"It said my payment failed, then charged me twice" Payments rejected across two cards and PayPal, then appearing as duplicates on the account · engineering	1 post User · Google Play Angry	<i>"Now my account shows multiple, duplicate payments made!!!"</i> Google Play · 1 Jul	Second month First seen 22 Jun
"The numbers stopped meaning what they used to" About 85 legacy reach and impressions measures stopped updating on 15 June; Views counts differently, so year-on-year breaks · product	1 post Analyst only Measured	<i>Views count differently from Reach, so historical comparisons break at that seam.</i> Agency changelog · 11 Jul	New Effective 15 Jun
"Delivery now reads the creative to pick the audience" Creative briefing has become a targeting decision; boost ships one creative unchanged to every placement · product	1 post Analyst only Measured	<i>One asset style per goal no longer works now that creative is read as targeting.</i> Agency blog · 15 Jul	Building Raised since Nov 2025
"It grew my business, and there's still nobody to call" Credits Facebook advertising with nearly doubling their business, while warning there is no service when something breaks · product	1 post User · Google Play Mixed	<i>Says advertising on Facebook almost doubled their business, then warns there is zero customer service.</i> Google Play · 1 Jul	Ongoing Both halves are chronic

What is not in this table matters as much as what is. Nobody in July complained about targeting, reach, cost per result, fake engagement, or being unable to boost at all — the problems that dominated every earlier period. On nine posts that is not evidence they are fixed; it is one quiet month. Two of them are still live and carried into the recommendations below.

WHAT'S NEW, WHAT'S STUCK, WHAT'S FIXED

NEW IN JULY

A running boost that cannot be found or cancelled
13 Jul · users · the month's most severe problem

About 85 legacy reach measures retired, replaced by Views
Effective 15 Jun, surfaced 11 Jul · analyst only

STILL UNRESOLVED

Payments failing, then appearing as duplicates
Second month running — first seen 22 Jun

No human reachable when money is involved
Raised since Aug 2023 · three posts this month

"I paid, and all I got was likes"
Since Feb 2014 · quiet in July, last seen 11 Jun

"It won't let me boost and won't tell me why"
Since Jun 2016 · quiet in July, last seen Jan 2026

LOOKS FIXED

"The engagement I paid for looked fake"
Six posts between Aug 2014 and Jan 2019, nothing since across a wide sweep.
Meta has said it tripled detection of suspected fake likes.

Still worth checking.
Silence can also mean the angriest people left. Check invalid-activity rates before calling it solved.

THE JULY MIX

Out of the 9 posts collected in July — not out of anyone's user base.

Product team can act on 6 of 9

6 product 3 support

Mood of the product posts 6

3 angry 3 measured

Mood of the other 3 3

3 angry — all support

A third of July is support, which is high, and all three are angry. The measured half of the product posts is both analyst articles — strip those out and every user post this month is angry.

BY PLATFORM

WHERE	POSTS	WHAT SURFACED HERE THAT DIDN'T ELSEWHERE
Google Play	4 3 angry	Dated and version-anchored, so the most checkable evidence we get. The duplicate-payment failure, the hacked-and-disabled account, and the one genuinely positive post of the month — which still ends in a warning about support.
Trustpilot	3 3 angry	The cancellation failure, in the sharpest language of the month, plus the 5-to-7-hour wait against an advertised 5-to-10 minutes. Trustpilot is where people go once something has already gone wrong, so it reads harsher by design, not by accident.
Agency blogs 2 publishers	2 Measured	The retired measures and the creative-as-targeting shift. Useful, and written by people who benefit when clients move spend off the button. Not user feedback, and not counted as such.

Twenty-five of the 29 channels we swept returned nothing for July — including the Apple App Store, Shopify reviews, TrustRadius, Capterra, TikTok and the Meta forums, all of which gave us material in earlier periods. Reddit, X, YouTube comments, Discord and G2 remain unreachable entirely. On a one-month period this is the single biggest limit on the report: **an empty channel means we did not get there, never that its users were content.**

HOW WE COMPARE

No competitor feedback was collected in July, so there is no comparison this month. We are not repeating last period's table as though it were current. Two things still stand and are worth restating in a line each: the destination people name when they stop boosting is **Meta Ads Manager**, which is ours — so almost nobody here leaves Meta over Boost, they move deeper into Meta. And the two closest outside substitutes, **TikTok Promote** and **LinkedIn Boost**, both offer something Boost does not: a business outcome you can buy directly, rather than engagement only. Nobody said they were leaving in July, and no rival was named.

RECOMMENDATIONS

Four items. Two come from July's evidence; two are **carried forward** because they are still live and were simply quiet this month — they are labelled with the date they were first raised, not presented as new. July did not produce a fifth worth your engineering time, and we have not invented one.

1 Make a running boost cancellable from where it was created

DO FIRST

"I can't stop a boost that's already running."

The month's only new user problem and its most severe. A boosted event does not appear in Ads Manager, so there is no surface on which to stop it; the assistant cannot find, pause or refund it; Business Suite refuses to edit it. The person is left watching spend continue. **Evidence: two posts, one source, this month, both from users.** Thin by volume, but the failure is specific and reproducible enough to act on without waiting for more.

→ [Route to prd-author](#)

2 Trace the failed-payment-then-duplicate-charge path

DO FIRST

"It said my payment failed, then charged me twice."

One post in July and one in June — the same shape both times: repeated rejections across multiple payment methods, then duplicate charges appearing on the account. Meta's help pages explain that boosts accrue and bill later at a threshold, which may account for some of what people are seeing, but **a correct explanation in documentation does not stop the bank alert.** Worth a trace now, while it is two cases rather than a pattern. **Evidence: two posts across two months, both users, both app stores.**

→ [Route to prd-author](#)

3 Say what the boost is optimising for, on the screen that takes the money

CARRIED FORWARD

"I paid, and all I got was likes."

Carried forward — first raised February 2014, last seen 11 June 2026, ten posts all time. Quiet in July, not resolved. The flow assigns an engagement goal without saying so, and sales and lead goals are not offered at all. A disclosure change rather than a rebuild: it adds no controls and does not touch the one-decision simplicity that is the button's whole advantage.

→ [Route to prd-author](#)

4 Show the reason a boost was blocked, where it was blocked

CARRIED FORWARD

"It won't let me boost and won't tell me why."

Carried forward — first raised June 2016, last seen January 2026, seven posts all time. Quiet in July. The reasons already exist in Meta's published policies; the failure is that someone stopped mid-purchase has to go and find them. One documented case has a roof-replacement advert blocked under housing policy, which no buyer could have predicted. Cheap, and it is real user pain.

→ [Route to prd-author](#)

Watching, not recommending yet. Two analyst-only items from July: the roughly 85 legacy reach measures retired on 15 June, and delivery now reading creative to choose the audience. Both are real and both affect boost, but **no user has raised either** — so they belong in next month's read, not this month's build list. If August brings user posts about numbers falling, check the June measurement change before diagnosing a performance problem.

ALSO WORTH A LOOK — NOT FOR THE PRODUCT TEAM

Three of July's nine posts are somebody else's job, and all three are support — a third of the month, from one team's queue. Shown in full; there are only three.

SUPPORT

There is no human behind the money

Live chat on a Business Suite support case advertises a 5–10 minute response and was reported as taking 5–7 hours. An AI assistant gave only vague answers about charges and could not escalate. A hacked-then-disabled account had nothing in the help pages explaining how to recover it, no phone number, and no reply to several emails. **Every product billing failure in this report ends in this queue**, which is why the two should be read together rather than separately.

Owner: Support · 3 of 3 non-product posts

NEXT STEPS

To address these, turn them into a PRD. The four product recommendations are ready to route.
The support items above are not included.
